THE GAP

AI agents now spend money on people's behalf — and the rails they use (Pix, SEPA Instant, FedNow, UPI) are instant and **irrevocable by regulation**. When an agent overspends its mandate, prepays a service that never arrives, or a sub-agent exceeds its delegator's authority, there is no recourse layer. Everyone built rails and intent standards; **nobody built the dispute + escrow layer across them**.

WHAT TVIST IS — FOUR GATES AROUND EVERY AGENT TRANSACTION

- 1 • **Jurisdiction**. The governing dispute regime is agreed before funds move — the Nash-optimal choice from 22 real regimes.
- 2 • **Consent**. The principal's mandate — or a sub-agent's attenuated delegation — is enforced before settlement, not refunded after.
- 3 • **Escrow**. Funds release only on delivery proof; contested holds refund the payer.
- 4 • **Resolution**. Recall only where the regime permits, on mandate-breach evidence; accepted disputes return their legal citation inline (BGB §177, UCC §2-711 ...).

One gate logic covers the full spectrum — human→agent, agent→sub-agent, agent↔agent, agent→resource (native x402 rail) — with zero humans required in the loop.

PROOF, TODAY

Adversarially validated in MIT/NANDA's agent swarm rig — every attack (clawback, escrow drain, over-mandate, friendly fraud) blocked vs. a plain ledger. Live as a dual-use API + site: agents integrate from one SKILL.md; flagship use case DigiDoot, a personal agent for every Indian citizen, settles via Twist on UPI.

POSITIONING

Complementary, not competitive: networks get their intent standards operationalized, custody providers their rules engine, agent platforms the trust layer their checkout protocols defer. The wedge compounds with every rail, protocol, and jurisdiction added.

Disclaimer: technical demonstration — a notional-credits sandbox, not a bank, payment institution, or law firm; legal citations are not legal advice. Full detail: Twist-Executive-Summary (DOCX / deck).
